

SWIM

Gates are Open for a Professional SWIM Seminar

System Wide Information Management, or more easily SWIM, is a term that in recent times has been used in many aviation products, services and conversations. Despite that, SWIM is still covered by a thin web because of its connections with multiple aviation domains – ATM, MET and AIM.

What is SWIM? How does it affect me and my organization? Am I SWIM already? What do I need to do in order to be considered a part of the SWIM community?

These are just a few of the questions that our SWIM Seminar will answer. SWIM represents the future – enroll in our program for a professional training to start your organization's SWIM today.

Top 5 Reasons Why you Should Attend

1. Save time – unravel all the SWIM 'fake news' in just two days.
2. Share SWIM experience – find out current SWIM practices from participants.
3. Find out who are the early implementers from an early implementer.
4. Find out more about how to prepare SWIM Call for Tenders.
5. Find out how to start your organization's SWIM planning.

Who Should Attend?

As with any new project, SWIM needs to follow the principle 'PLAN THE WORK – WORK THE PLAN'. Our seminar is developed to help the ones in charge of planning the work: civil and military managers and decision makers of Civil Aviation Authorities (CAAs), Air Navigation Service Providers (ANSPs), airports, and aircraft operating agencies. Those are the first stakeholders which are affected by SWIM and have to implement it with the support of the ATM manufacturing industry.

Therefore if you are one of the stakeholders mentioned above, this seminar has been built for you!

Prerequisites

There are no prerequisites for this seminar. The participants are nonetheless recommended to have ICAO Operational Level 4 in English language proficiency.

The SWIM Seminar Format

The SWIM Seminar is two days long comprising 8 instructive and interactive sessions. At the end, participants will receive a SWIM Completion Certificate.

The seminar also includes a part that completely focuses on the participants requirements. Prepare your questions ahead in order to fully take advantage of the SWIM Seminar.

Hope to See You Here

The Spring Class:
28 Mar 2018 – 29 Mar 2018
The Autumn Class:
19 Sep 2018 – 20 Sep 2018

The SWIM Seminar Schedule

Day 1: The Foundation (Theory)

- Opening
- Where Does SWIM Come from?
Break
- Introduction into SWIM & the SWIM Domains
Lunch Break
- Overview on Current SWIM and ICAO Connections
- Main Areas of SWIM
Break
- Early SWIM Implementations

Day 2: The Planning, Financing, Transition (Praxis)

- The Seminar Participants SWIM
Break
- SWIM Transition – Overview
Lunch Break
- Planning, Financing, RfPs – Awareness (1)
Break
- Planning, Financing, RfPs – Awareness (2)
Closing

Where to Register?

If you are interested in our SWIM Seminar send us an email at swim-seminar@a4f.aero or go to one of the following websites:
www.ac-b.de
www.asbu4future.aero

The Venue

In order to ensure the best possible environment for productive work, the SWIM Seminar is held in one of the most beautiful areas in Germany – the Lake Constance County (Bodenseekreis) at the shores of Lake Constance.

Other Courses and Related Material

A4F can develop custom-made seminars in the areas of AIM and ATM including AMHS to SWIM Transition & Migration Course-Advanced.

For more information contact info@a4f.aero

Do check out, the AC-B Study & Self-Training Books – Introduction to AMHS & Introduction to ATN/AMHS Directory Services.

For further information you can reach us at kontakt@ac-b.de

Come on board the SWIM Seminar Register early, the seats are limited!

AC-B

ATC and Business Systems GmbH provides software solutions and consulting services for the aerospace industry. With a long experience in aeronautical data communications and in particular in the AMHS technology, we provide our clients unique solutions that fit their needs. AC-B is your dependable partner when it comes to the implementation of highly available and reliable systems. AC-B will support you throughout the entire life cycle of a system: starting with the concept until its re-engineering and migration. Our AMHS experience will help you define your migration path from AMHS to SWIM. We make your goals our goals – and we shall support you in all technical and logistical problems.

A4F

ASBU for Future GmbH is an innovative company that focuses on supporting the aviation industry in managing the implementation of the ASBUs upgrades as described in the Global Air Navigation Plan of ICAO. With over 35 years of entrepreneurial experience in the aviation industry, we provide our clients with the knowledge needed to adapt to the world today. The concept for the European, African & Middle East Centralized AIS Databases, the adaptation of the ICAO Aeronautical Charting Manual to PINS charts, the paradigm shift from AIS to AIM, re-drafting the SWIM manual, the migration from AMHS to SWIM are just a few of the topics which A4F has been supporting along the years. There's a way to do it better – A4F can help you find it.
